Drawback: The Louvain algorithm requires tuning of resolution parameter, which affects the granularity of the detected communities. Inappropriate parameter settings can lead to suboptimal community detection.

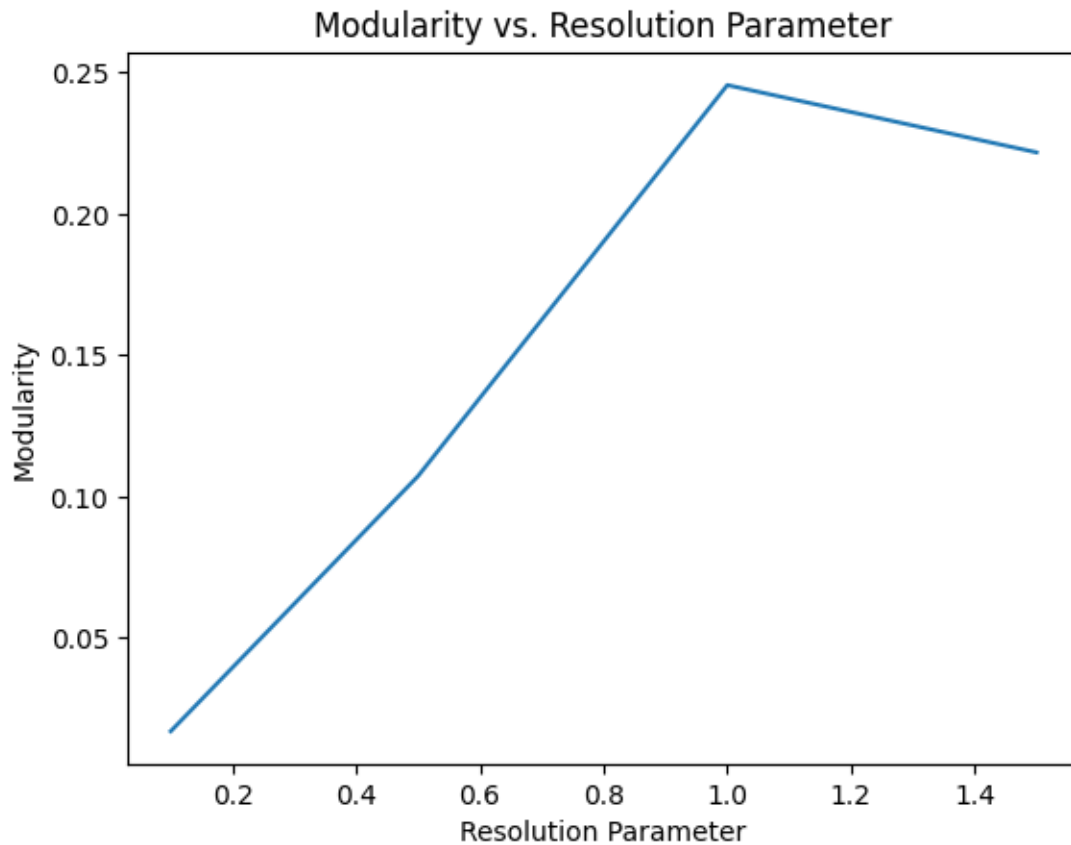

```

[13]: # Sensitivity to resolution parameter
resolution_values = [0.1, 0.5, 1.0, 1.5]

The Louvain algorithm's performance can be influenced by the initial partitioning of the network. Different initial conditions may lead to different final community structures.

```
[14]: # Dependency on initial conditions
initial_partitions = [community_louvain.best_partition(G_undirected) for _ in range(5)]
